1. ✓ These questions come from the Django project tutorial materials. What is stored in the variable `request.POST`?
  - ☒ A dictionary-like object that lets you access submitted POST data
  - ☐ The code that runs after a view method is complete
  - ☐ The name of the model to store an extra copy of the incoming data
  - ☐ The next page to redirect the browser to after the processing is complete
2. ✓ What does the `django.urls.reverse()` function do?
  - ☒ It constructs the path to a view using the name of a path entry in `urls.py`
  - ☐ It sends the POST data back to the browser in the case there is an error
  - ☐ It reverses the order of the characters in a string
  - ☐ It sends a 404 error if the record cannot be loaded
3. ✓ What happens if you access a detail view like `results()` in Django tutorial 4 and provide a key that does not exist on the URL?
  - ☒ You get a 404
  - ☐ You get a 200
  - ☐ The server crashes and sends you a 500
  - ☐ The record is automatically created but left empty
4. ✓ In `polls/templates/polls/detail.html` file in Django tutorial 4, what happens if you leave out the `csrf_token` line in the form?
  - ☒ The post data will be blocked by the server

Done

- ☐ The form will look strange in the user's browser
  - ☐ The favicon will not show up properly in the title bar
  - ☐ The server will not know which object to retrieve once the POST data is sent
5. ✓ In polls/templates/polls/detail.html file in Django tutorial 4, which bit of code tells the view that will receive the POST data which question to associate this vote with.
- ☒ url 'polls:vote' question.id
  - ☐ forloop.counter
  - ☐ question.question\_text
  - ☐ choice.choice\_text
6. ✓ Which HTTP method is used when sending data to the server what will modify or update data?
- ☒ POST
  - ☐ GET
  - ☐ 404
  - ☐ 200
7. ✓ What does the Django template filter "pluralize" do?
- ☒ It emits an 's' if the value is > 1
  - ☐ It converts a word to the plural form depending on the user's selected language
  - ☐ It returns a random item from the given list
  - ☐ It splits a string using a specific delimiter character
