1. ✔ These questions come from the Django project tutorial materials. When you see a path with the following pattern in urls.py,

   ```
   path('<int:question_id>/', views.detail, name='detail'),
   ```

   where in the code does the question_id value parsed from the URL end up?

   ○ As part of the database connection used by the model

   ○ As a global variable in views.py

   ◉ As an additional parameter to the detail() view

   ○ In the context that is passed to the render engine

   ○ In the cookies structure

2. ✔ What kind of data is passed into a view in the 'request' object?

   ○ All of the global Python variables

   ◉ Information about the incoming HTTP request from the browser

   ○ A list of all the models available to the application

   ○ All the possible combinations of context variables

3. ✔ Which of the following SQL commands will be run by the Question.objects.values() statement in a view function?

   ○ DELETE

选择语言 ▼

○ SELECT

Done

○ INSERT

○ UPDATE

4. ✔ How do indicate that a particular question cannot be found in a detail view?

○ Raide an Http500 exception

◉ Raise an Http404 exception

○ Send back an HttpResponse with the text 'not found'

○ Send back a blank page

5. ✔ How to retrieve only the first five objects in a table using a Django model query?

○ Use an SQL DELETE to remove all the recrds beyond the first 5

◉ Add [:5] to the end of the model query

○ Add a LIMIT clause to the retrieved SQL

○ Retrieve all the records and then write a loop to discard all but the first 5

6. ✔ In Django, why do we add an extra folder (i.e. namespace) our templates?

○ To make it impossible to extend a template from one application in another application

◉ To make sure there is not a conflict with a template of the same name in a different application

○ To make it harder to find and edit template files

○ To make sure that no other application can use a template file

7. ✔ What is the difference between a list view and detail view?

○ A list view lists all the fields in a model item and the detail view focuses on one field

◉ A list view shows multiple items and a detail view shows only one item

○ A list view throws a 404 error but a detail view never throws a 404 error

8. ✔ What is a "404" error?

○ It tells the browser that something unexpected and bad happenned inside the server as it was fulfilling the request

◉ It tells a browser that it did not get the page it was looking for

○ It tells the browser that it needsto redirect to another url

选择语言 | ▼

○ It tells the browser that it lacks the necessary authorization to view the requested page

Done

9. ✔ In Django, what is the default language used in HMTL template files?

○ HAML

○ Handlebars

⦿ DTL - Django Templating language

○ VTL - Velocity Templating Language

○ JSP - Java Server Pages

○ Moustache

10. ✔ If the "get_object_or_404()" helper function finds the requested item it returns the item. What happens if it cannot return the item?

○ It returns an empty object

⦿ It raises an Http404 exception

○ It returns -1

○ It returns False

11. ✔ Why do we namespace URL names using the "app_name" variable in the urls.py file?

○ To make it impossible reference a path from one application in another application

⦿ In case we have multiple applications with the same named path

○ To make it harder to write the urls.py file

○ To make sure that no other application can access our local paths
